LETTER

Sir:

In the Advisory Action mailed July 29, 2002, the Examiner indicated that issues of new matter were raised by the recitation in Claim 7 of "said charged film having a constant surface charge of a polarity opposite to that of said colored charged particles regardless of polarity of electricity supplied to the associated electrode." Applicants submit that such a recitation is fully supported by the specification as originally filed.

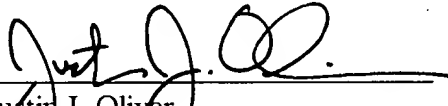

Specifically, Figs. 9 to 14 depict embodiments of the electrophoretic device of Claim 7. In the embodiments, colored particles 7 are positively charged (see e.g., page 45, line 24) and charged films 18 having negative surface charges are formed on display electrodes 4 and counter electrodes 5 (see e.g., page 44, lines 10-15, and page 46, line 12).

The negative surface charges provided to charged films 18 are retained regardless of the polarity of the electricity supplied to the associated electrodes 4 and 5 (“[T]he electrodes 4 of a left cell and a right cell of each device were supplied with -50 volts and +50 volts, respectively, relative to the counter electrodes 5.” Page 46, lines 14-17; see also Figs. 11A to 11C, and page 21, line 8 to page 23, line 9).

Accordingly, Applicants submit the changes to Claim 7 presented in the Amendment After Final Rejection filed July 19, 2002, are fully supported by the specification and do not constitute new matter. Applicants request favorable consideration thereof.

Applicants’ undersigned attorney may be reached in our Washington, D.C. office by telephone at (202) 530-1010. All correspondence should continue to be directed to our below-listed address.

Respectfully submitted,
